

ORACLE

Group Centralized Monitoring & Observability Platform

Management response | OCI Observability scope for application,
API and Kubernetes gaps

AXIAN Telecom

Observability & Security team | RFP AXIAN-IT & Network-OBS-2026 | August
2026

Safe Harbor

This presentation is intended to outline our general product direction. It is intended for information purposes only, and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described for Oracle's products may change and remains at the sole discretion of Oracle Corporation.

Statements in this presentation relating to Oracle's future plans, expectations, beliefs, intentions, and prospects are "forward-looking statements" and are subject to material risks and uncertainties. A detailed discussion of these factors and other risks that affect our business is contained in Oracle's Securities and Exchange Commission (SEC) filings, including our most recent reports on Form 10-K and Form 10-Q under the heading "Risk Factors." These filings are available on the SEC's website or on Oracle's website at <http://www.oracle.com/investor>. All information in this presentation is current as of August 2026 and Oracle undertakes no duty to update any statement in light of new information or future events.

Some regulatory certifications or registrations to products or services referenced herein are held by Cerner Corporation. Cerner Corporation is a wholly owned subsidiary of Oracle. Cerner Corporation is an ONC-certified health IT developer and a registered medical device manufacturer in the United States and other jurisdictions worldwide.

**Preserve product ownership. Standardize OCI
Observability evidence. Validate every
commercial assumption.**

Three scoped layers, one evidence model

OCI Observability fills application, API, customer-managed Kubernetes and log-analysis gaps; product teams retain their platforms and remediation.

OCI OBSERVABILITY SERVICES

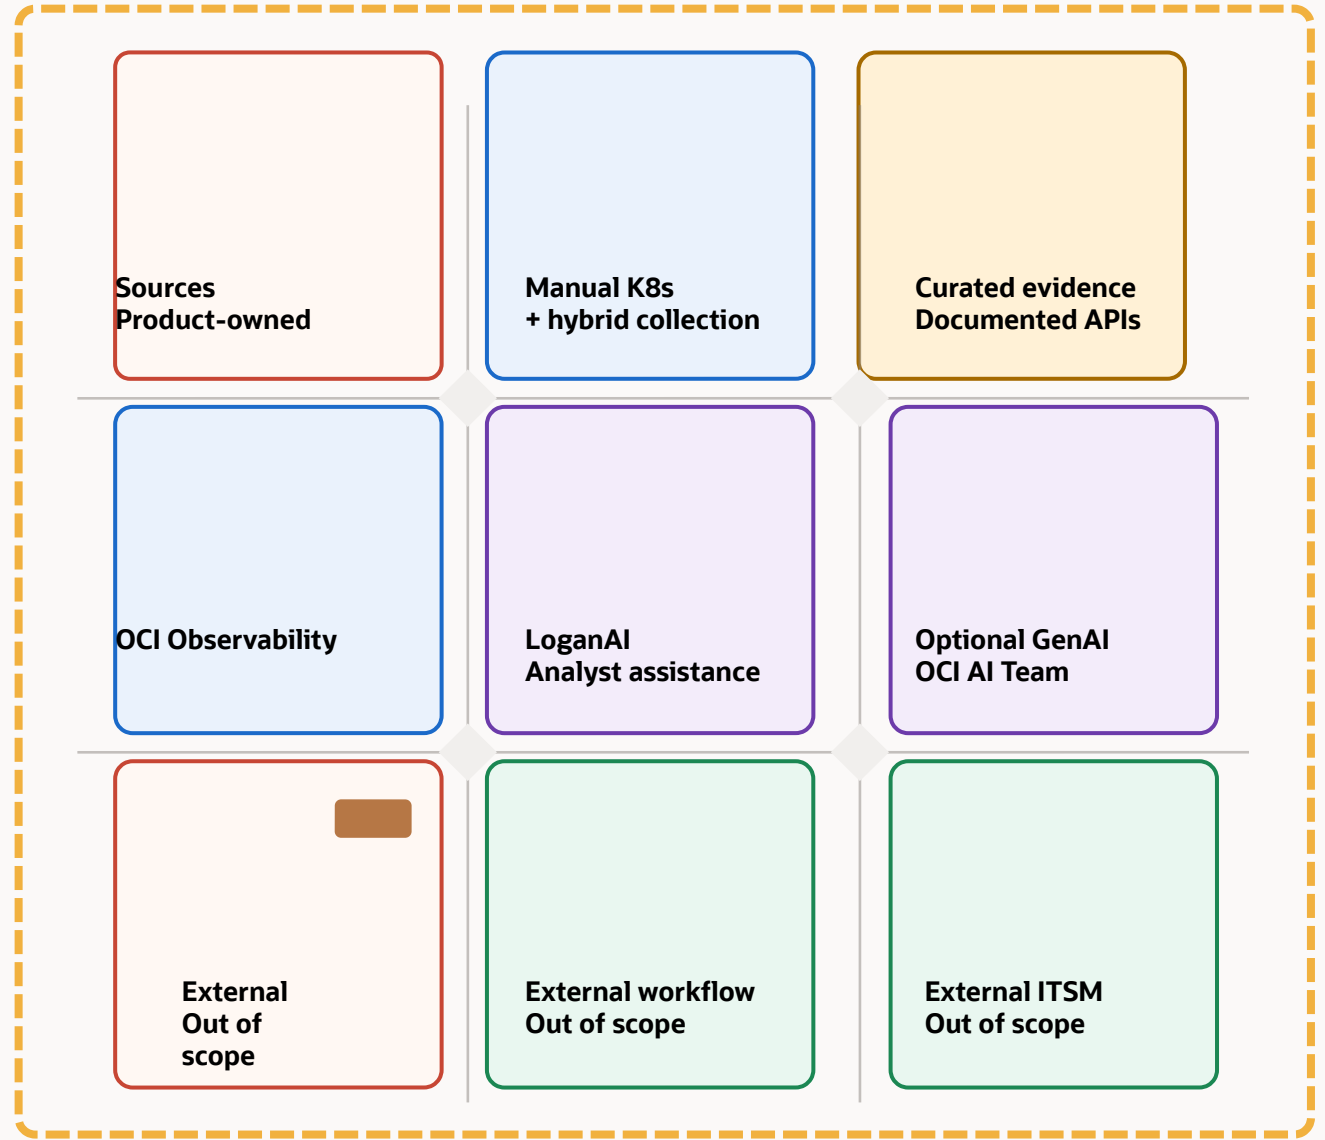

- Monitoring metrics, alarms and pipeline health
- Logging and Connector Hub for approved collection/routing
- Log Analytics active/archive tiers, parsers, dashboards and LoganAI
- APM/OpenTelemetry traces, topology, browser and synthetics
- Notifications for approved HTTPS/email alarm delivery

MANUAL COLLECTION + EXTERNAL BOUNDARIES

- Customer-managed Kubernetes uses manual Helm/manifests deployment
- Management Agent/Gateway supports approved hybrid sources
- Product teams own access, instrumentation, upgrades and remediation
- External assurance, ITSM and database tooling are out of scope
- Optional GenAI correlation belongs to the OCI AI Team

OCI Observability evidence plane, product-owned action

Solid flow: telemetry and evidence.
Dashed flow: optional advisory correlation. External products and production actions remain product-team owned.

Coverage aligned to the Observability & Security remit

01 Customer-managed Kubernetes

Log Analytics Kubernetes Monitoring Solution uses manual Helm/manifests deployment with version, RBAC, egress, resource and rollback validation.

02 Applications and APIs

APM and OpenTelemetry add traces, topology, browser visibility and synthetics. Application teams own instrumentation and SLOs.

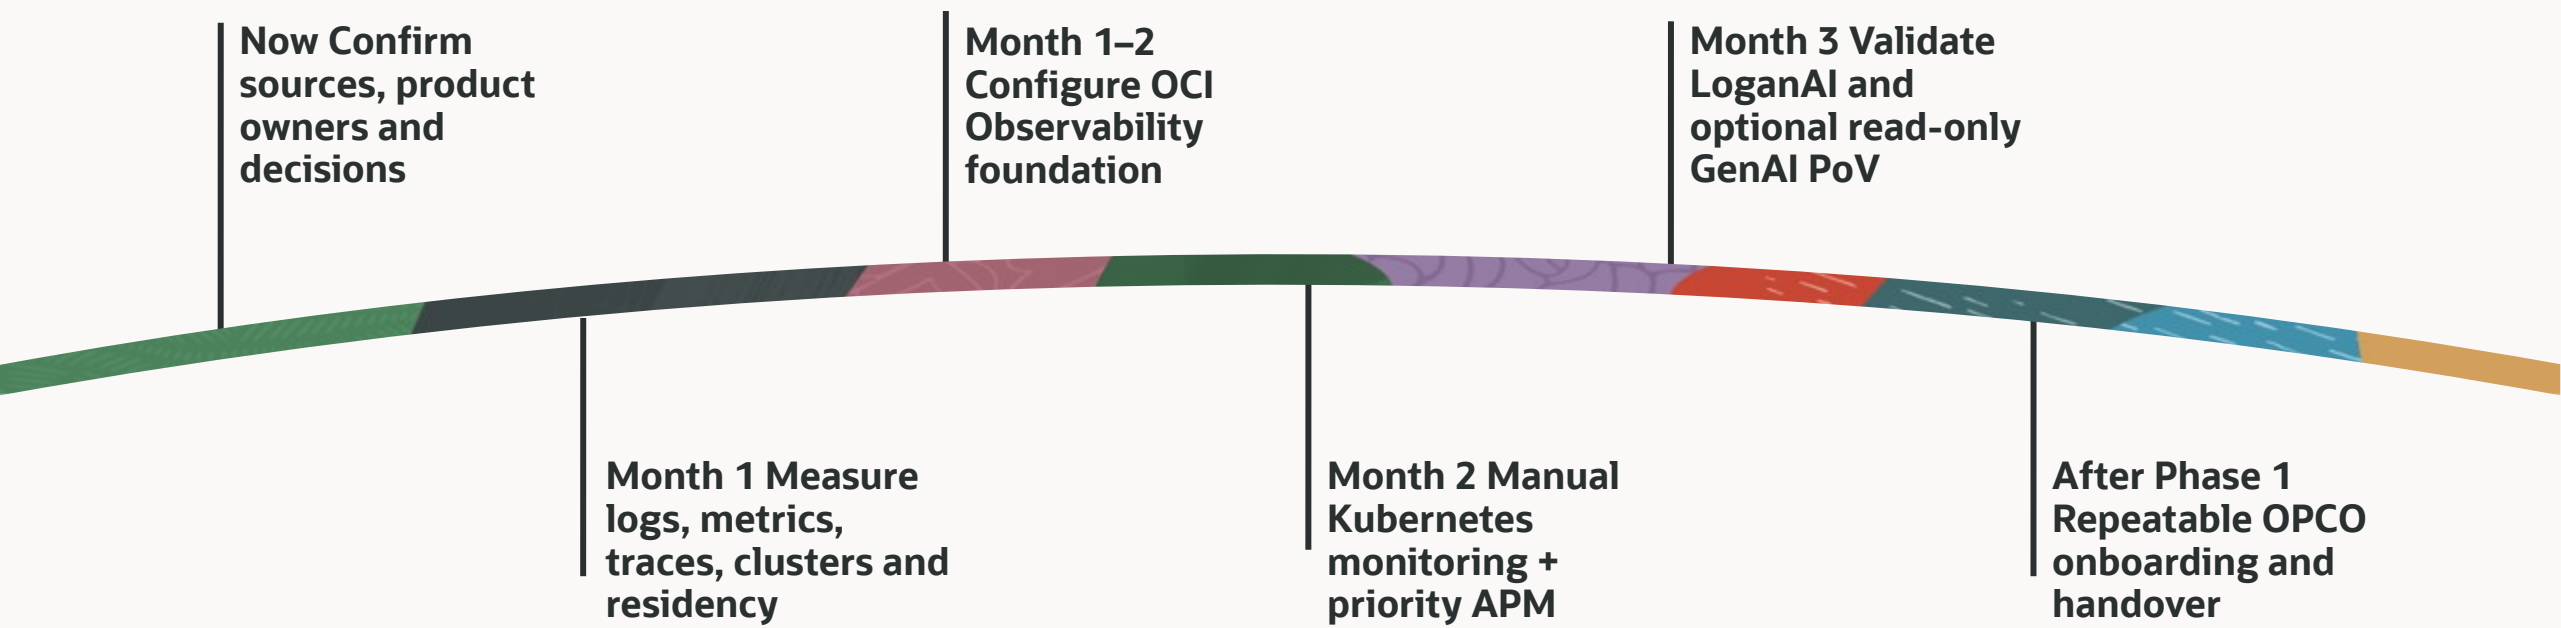

03 Logs, metrics and alerting

Monitoring, Logging, Connector Hub, Log Analytics, Management Agent/Gateway and Notifications provide the shared evidence layer.

What remains conditional or requires product-team input

Partial requirement	Why partial	Closure requirement
Customer-managed K8s deployment	Distribution, version, RBAC and network path remain open	Manual Helm/manifests PoV + rollback
APM instrumentation	Application teams must provide service identity and trace propagation	Priority-app trace-continuity test
APM commercial mapping	300 GB = 1 B95634 active-storage unit is a working presumption	Oracle quote and observed-volume validation
Custom Log Analytics content	Customer sources may require parsers, labels and dashboards	Parser accuracy + lifecycle ownership
Sizing, resilience & residency	Volume, retention, regions and recovery remain discovery inputs	Benchmark + approved decisions

Measured delivery from discovery to rollout

Decisions required to start the Observability proof of value

Approve the scoped architecture now; gate pricing and production commitments on measured evidence and the final Oracle quote.

APPROVE NOW

- OCI Observability-only delivery boundary
- Manual Kubernetes Monitoring Solution deployment
- APM/OpenTelemetry for priority applications and APIs
- Working APM assumption: 300 GB active = 1 × B95634
- Product teams own access, instrumentation and remediation
- Optional GenAI correlation stays with the OCI AI Team

GATE BEFORE COMMITMENT

- Oracle quote confirms B95634 mapping and USD rate
- Measured log, metric, trace and synthetic volumes
- Supported Kubernetes distribution/version and private egress
- Parser coverage, data classes, residency and retention
- Availability, recovery and monitor-the-monitoring evidence
- LoganAI/GenAI region, IAM, quality and human-approval controls

Approve a scoped Observability proof of value

Next action

Launch a bounded Phase 1: manually onboard representative Kubernetes clusters, instrument priority applications/APIs, validate Log Analytics and APM sizing, and confirm the Oracle commercial mapping before rollout.
